

MSO202A COMPLEX ANALYSIS
Assignment 4

Exercise Problems:

1. Verify Cauchy's theorem for $f(z) = z^2$ over the boundary of the square with vertices $1 + i$, $-1 + i$, $-1 - i$ and $1 - i$, counterclockwise.
2. Use ML-inequality to prove the following:

(a) $\left| \int_{\gamma} \frac{1}{1+z^2} dz \right| \leq \frac{\pi}{3}$, γ is the arc of $|z| = 2$ from 2 to $2i$.

(b) $\left| \int_{\gamma} (1 + z^2) dz \right| \leq \pi R(R^2 + 1)$, γ is the semicircular arc of $|z| = R$.

3. By parametrizing the curve or otherwise, evaluate:

(a) $\int_C \tan z dz$, where C is the circle $|z| = 1$ oriented counter-clockwise.

(b) $\int_C \operatorname{Re} z^2 dz$, C is the circle $|z| = 1$ oriented counter-clockwise.

(c) $\int_C e^{4z} dz$, C is the shortest path from $8 - 3i$ to $8 - (3 + \pi)i$.

4. Use Cauchy's integral formula to find all simple closed curves C for which the following holds:

(a) $\int_C \frac{1}{z} dz = 0$, (b) $\int_C \frac{e^{1/z}}{z^2 + 9} dz = 0$.

5. Integrate $\frac{z^2}{z^4 - 1}$ counter-clockwise around the circle (a) $|z + 1| = 1$ (b) $|z + i| = 1$.

6. Integrate the functions counter-clockwise on the unit circle $|z| = 1$:

(a) $\frac{z^3}{2z - i}$ (b) $\frac{\cosh 3z}{2z}$ (c) $\frac{z^3 \sin z}{3z - 1}$.

7. Let Γ denote the positively (counter-clockwise) oriented boundary of the square whose sides lie on the lines $x = \pm 2$ and $y = \pm 2$. Using Cauchy's integral formula, evaluate the following integrals:

(a) $\int_{\Gamma} \frac{\cos z}{z(z^2 + 8)} dz$ (b) $\int_{\Gamma} \frac{z}{2z + 1} dz$.

Problem for Tutorial:

8. Let C be the positively oriented circle $|z| = 3$. If $f(w) = \int_C \frac{2z^2 - z - 2}{z - w} dz$, $|w| \neq 3$, then show that $f(2) = 8i\pi$. What is $f(w)$, if $|w| > 3$?

9. Use Cauchy's integral formula to find closed contours C in complex plane satisfying

(a) $\int_C \operatorname{Log}(z) dz = 0$ (b) $\int_C \frac{\cos z}{z^6 - z^2} dz = 0$.

10. Using Cauchy's integral formula, integrate counterclockwise:

$$\oint_C \frac{\operatorname{Ln}(z+1)}{z^2+1} dz, \quad C : |z-2i|=2.$$
